

Trend lines and Market Structure

Trend lines

Trend lines are easily recognizable lines that traders draw on charts to connect a series of candles together. The resulting line is then used to give the trader a good idea of the direction in which the coin might move.

Rules:

- * It takes 3 or more touches to validate a TL.
- * The more touches on the trend line the stronger it becomes.
- * TL's can be drawn using both candles and wicks
- * TL's on the higher TF's will be stronger than on the smaller TF's.

Always go with the trend, The TREND is your FRIEND.

Market Structure

Market structure by definition is the simplest form of price movement in the market. It is basic support and resistance levels on the charts, swing highs, and swing lows. These are levels, which are easily identified and hold until they don't.

Market structure is a trend following tool that traders read and follow based on how the coin moves. From bullish moves, to bearish and in between with ranges.

MS on the higher TF's will be stronger than on the smaller TF's.

There are 3 types of Market Structure:

1. Bullish trend
2. Bearish trend
3. Sideways trend
